

FASTCEL high light

FINE TENCEL[®] SPINNING PROCESS BY TS

FASTCEL high light

Innovative high
light Tencel® fabrics

-80 gr/m²

Textil Santanderina, in its commitment to both innovation and ecologically sustainable fabrics of outstanding quality, has created FASTCEL HIGH LIGHT.

The new FASTCEL HIGH LIGHT Tencel® range has been developed with an exclusive spinning process that create high light fabrics under 80 gr/m² weight .

This innovative process, more sustainable and eco-friendly, avoids the fibrillation of fabric before enzyme wash [reduced to 20-30 minutes only and softener], saving time during washing process and increasing the fabric characteristics.

FASTCEL HIGH LIGHT offers enriched transparency effects, light and shade visions and give a special fluidity and drop to fabrics.
